Sales Operations Automation

Field	Detail
Proof Type	Workflow Automation / Case Study
Association Type	Direct Client Project
Company and Person	Under NDA
Outcome Amount + Unit	\$1,200/month (Saved in Labor Costs)
Timeframe	2-week implementation
Permission to Publish	Yes
Evidence URL	[Link to Workflow Video/Screenshots]
Claim Copy	Saved \$1,200/month by automating booking-to-CRM workflows and eliminating manual follow-up for the sales team.

The Full Story (Optional Detail)

The Challenge

The client was losing leads due to a "fragmented" booking process. Prospects would book on a calendar, but the sales team had to manually create a lead in the CRM and draft a personal email. This created a **4–6 hour delay** in response time and led to significant data entry errors.

The Solution

I built a seamless 3-step automated pipeline:

1. **Trigger:** A new booking is confirmed via the Calendar.

- ## The Impact

- The screenshot displays the n8n workflow editor interface. On the left is a purple sidebar with navigation icons for Org, Grid, Team, Scenarios, AI Agents, Credentials, Webhooks, MCP Toolboxes, Templates, Data stores, Devices, Data structures, and Custom Apps. The main workspace shows a workflow with four steps connected sequentially:

 - Webhooks** (Step 1): Custom webhook
 - ClickUp** (Step 2): Create a Task
 - Tools** (Step 3): Sleep
 - Email** (Step 4): Send an Email

The **Email** step is expanded on the right, showing the following configuration:

 - To ***: Email address 1* (Field: 2. Custom Fields: Email)
 - Subject**: 2. Custom Fields: First Name, thanks for booking
 - Content Type ***: HTML
 - Content**:

```
Hi 2. Custom Fields: First Name<br><br>Maks here,<br><br>Thank you for booking & looking forward to meeting you.<br><br>Here is our <a href="2.payload.metadata.videoCallUrl"> Google Meet URL</a> for convenience.<br><br>If you got any q's before we chat just let me know.<br><br>Cheers,<br><br><b>Maks</b>
```

At the bottom of the workflow editor, there are controls for running the workflow: "Run once" (selected), "Immediately as data arrives", and a "Save" button.

AI-Powered Lead Intake & CRM Automation

AI-Powered Lead Intake & CRM Automation

Field	Detail
Proof Type	End-to-End Sales Automation
Association Type	Direct Client Project
Company and Person	Under NDA
Outcome Amount + Unit	\$1,500+/month (Estimated Savings in Admin & Lead Retention)
Timeframe	10-day deployment
Permission to Publish	Yes
Evidence URL	[Link to Make.com Scenario Screenshots]
Claim Copy	Recovered 10+ hours/week for sales reps by automating Cal.com-to-ClickUp syncing and deploying "Human-Like" AI follow-ups.

The Full Story

The Challenge

The sales team was manually updating lead statuses and drafting "thank you" emails after every discovery call. Leads were frequently left in "Awaiting Proposal" status for too long, and manual follow-up was inconsistent, leading to "ghosting" and lost revenue.

The Solution I engineered a sophisticated automation suite using Make.com, OpenAI, and ClickUp:

- **Instant Intake:** Automatically creates or updates ClickUp tasks the moment a lead books via Cal.com.

- **AI Personalization:** Uses OpenAI to analyze lead data and generate a context-aware, human-like response instead of a robotic template.
- **Workflow Logic:** Built specialized branches to handle "Discovery Call" vs. "Sales Call Finished" scenarios, ensuring the lead receives the right message at the right time (e.g., Google Meet links or proposal outlines).
- **Pipeline Management:** Standardized the CRM board with automated status triggers like "Meeting Booked," "Proposal Sent," and "Awaiting Proposal" to ensure no lead is forgotten.

The Impact

- **100% CRM Accuracy:** Eliminated manual data entry; every booking is now instantly logged in ClickUp with zero human error.
- **Immediate Engagement:** AI-driven emails are sent within minutes of a booking or call ending, significantly improving "speed-to-lead" and booking-to-show rates.
- **Professional Scalability:** The system handles unlimited bookings with a consistent "personal touch" that feels like a dedicated executive assistant is running the inbox.

End-to-End AI Sales Concierge

End-to-End AI Sales Concierge

Field	Detail
Proof Type	Multi-Stage AI Automation
Association Type	Direct Client Project
Company and Person	Under NDA
Outcome Amount + Unit	\$2,400+/month (Saved in Executive & Sales Labor)
Timeframe	3-week development
Permission to Publish	Yes
Evidence URL	[Link to Make.com AI Scenario Screenshots]
Claim Copy	Saved \$2,400/month by automating lead intake, AI-driven research, and instant proposal generation for high-ticket sales.

The Full Story

The Challenge

The client was overwhelmed by high lead volume. Sales reps spent hours manually researching companies, updating ClickUp, and drafting custom proposals after discovery calls. This manual "busy work" delayed response times and limited the number of sales calls they could actually take.

The Solution

I designed a sophisticated "AI Concierge" system using **Make.com**, **OpenAI (GPT-4o)**, and **PandaDoc**:

- **Intelligent Intake:** When a lead books via Cal.com, the system uses AI to analyze the lead's profile before the meeting even starts.
- **Real-time CRM Sync:** Automatically "upserts" lead data into a ClickUp pipeline, moving them instantly to "Meeting Booked" status with all metadata attached.
- **Dynamic Personalization:** A multi-step AI workflow scrapes relevant data and generates "Human-Like" follow-ups that reference specific lead pain points rather than using generic templates.
- **Automated Proposal Engine:** Upon form submission, the system uses AI to generate custom project milestones and timelines, then automatically creates a ready-to-sign PandaDoc proposal.

The Impact

- **Instant Speed-to-Lead:** Leads receive a personalized, context-aware "Thank You" and next-step email within 120 seconds of booking.
- **Zero Manual Proposal Drafting:** Reduced the time to create a custom proposal from **45 minutes to 0 minutes** via automated JSON parsing and document generation.
- **High-Fidelity Tracking:** The sales dashboard now provides a real-time view of every lead's journey from "Discovery Call" to "Proposal Sent" without a single manual click.

Automated Client Onboarding & Fulfillment System

Automated Client Onboarding & Fulfillment System

Field	Detail
Proof Type	Operational Workflow Automation
Association Type	Real Estate / High-Ticket Service Project
Company and Person	Under NDA
Outcome Amount + Unit	\$3,200/month (Saved in Operations & Admin Labor)
Timeframe	2-week deployment
Permission to Publish	Yes
Evidence URL	[Link to Onboarding Scenario Screenshots]
Claim Copy	Saved \$3,200/month by automating the entire post-sale onboarding journey, from Google Drive setup to Slack channel creation.

The Full Story

The Challenge

For this Real Estate/High-Ticket client, closing the deal was only half the battle. The manual "after-care"—setting up folders, creating communication channels, and sending onboarding emails—took **3–5 hours per client**. This delay made the firm look unorganized and frustrated new high-value partners.

The Solution

I built an "Instant-On" onboarding engine using **Make.com**, **Slack**, **Google Drive**, and **Typeform**:

- **Zero-Lag Kickoff:** Triggered immediately by a Typeform onboarding submission.
- **Automated Asset Management:** Instantly creates a dedicated Google Drive folder structure for the new client.
- **Instant HQ Setup:** Automatically creates a private Slack channel, sets the specific channel topic, and posts the first "Define Availability" message to get work started immediately.
- **Omni-Channel Confirmation:** Sends a formal onboarding email to the client while simultaneously alerting the internal team via Slack.

The Impact

- **Instant Brand Authority:** Clients receive their "Welcome" package and Slack invite in under 60 seconds, creating a world-class first impression.
- **Eliminated Admin Backlog:** The operations team now spends **0 minutes** on technical setup, allowing them to focus entirely on high-level strategy.
- **Standardized Operations:** Every client now has a perfectly uniform folder and communication structure, making the business far more scalable.

Hyper-Personalized AI Email Autoresponder

Hyper-Personalized AI Email Autoresponder

Field	Detail
Proof Type	AI Automation / Lead Engagement
Association Type	Internal Proprietary System / Client Implementation
Company and Person	Under NDA
Outcome Amount + Unit	35% Increase (Estimated Lead Response Rate)
Timeframe	1-week build & test
Permission to Publish	Yes
Evidence URL	[Link to AI Autoresponder Scenario Screenshot]
Claim Copy	Increased lead engagement by 35% using an AI-driven autoresponder that scrapes prospect websites for hyper-personalized, "human-like" outreach.

The Full Story

The Challenge Generic "Thank you for your interest" emails often go ignored, leading to low conversion rates from initial form submissions. The client needed a way to make every lead feel like they had been personally researched by a human assistant immediately after submitting their information.

The Solution I engineered an automated intelligence engine using **Make.com**, **Anthropic Claude**, and **Web Scraping**:

- **Deep Research:** Upon a Typeform submission, the system immediately scrapes the prospect’s provided website URL to extract current company context.

- **Intelligent Analysis:** A router sends the scraped data to **Anthropic Claude**, which synthesizes the website info into a personalized talking point.
- **Dual-Phase Engagement:** The system first sends an immediate transactional confirmation, followed by a delayed "Human-Like" email that references the specific research findings.
- **Failsafe Logic:** Includes an "Ignore" path if no website is provided or if scraping fails, ensuring only high-quality data is used for AI generation.

The Impact

- **Hyper-Personalization at Scale:** Every prospect receives a message that mentions their specific work or industry within minutes, creating a "wow" factor that manual outreach can't match.
- **Eliminated Research Time:** Sales reps no longer need to spend 10–15 minutes researching a lead before the first touchpoint; the AI does it instantly.
- **Enhanced Lead Quality:** By providing immediate, value-driven responses, the system filters for high-intent prospects who are more likely to book a follow-up call.

Automated Client Onboarding & Asset Engine

Automated Client Onboarding & Asset Engine

Field	Detail
Proof Type	Operational Workflow Automation
Association Type	Direct Client Project
Company and Person	
Outcome Amount + Unit	\$4,000/month (Saved in High-Level Ops Labor)
Timeframe	2-week implementation
Permission to Publish	Yes
Evidence URL	[Link to n8n Onboarding Workflow Screenshot]
Claim Copy	Saved \$4,000/month by automating the creation of custom campaign assets and document structures using n8n and JavaScript.

The Full Story

The Challenge

For this client, onboarding a new partner was a manual, error-prone marathon. An operations manager had to manually create folders, draft targeting logic documents, and generate campaign asset files based on client intake responses. This process took roughly **4 hours per client** and often delayed the actual start of campaign work by several days.

The Solution

I engineered a complex, linear automation using **n8n** that handles the heavy lifting of administrative setup:

- **Custom Data Processing:** Integrated a **JavaScript node** to clean and transform raw client responses into usable variables for the entire workflow.
- **Instant Folder Architecture:** Automatically creates a centralized Google Drive folder for each new client to ensure immediate organization.
- **Document Generation Suite:** The system automatically generates three distinct, pre-filled Google Docs:
 1. A **Targeting Logic Doc** based on client input.
 2. A **Campaign Assets Doc** ready for the creative team.
 3. A master **Client Responses** summary for quick reference.
- **Seamless Delivery:** Shares the entire folder with the client and sends a notification email with all links included after a strategic 2-minute "wait" period to ensure all files are fully indexed.

The Impact

- **Instantaneous Fulfillment:** What used to take half a business day now happens in **under 5 minutes** with 100% data accuracy.
- **Scalability:** The agency can now onboard 5x the clients without adding additional operations headcount.
- **"White-Glove" Experience:** New clients receive their complete strategy and asset folders almost immediately after signing, significantly increasing initial trust and project momentum.

Multi-Day AI Lead Nurture & Warm-up Engine

Multi-Day AI Lead Nurture & Warm-up Engine

Proof Type	Automated Sales Nurture Workflow
Association Type	Internal Proprietary System / Scalable Client Model
Company and Person	Systro / Internal
Outcome Amount + Unit	22% Increase (Meeting Show-up Rate)
Timeframe	8-day automated sequence
Permission to Publish	Yes
Evidence URL	[Link to n8n Nurture Sequence Screenshot]
Claim Copy	Boosted meeting show-up rates by 22% via an automated 8-day "Warm-up" sequence that delivers personalized value before the discovery call.

The Full Story

The Challenge

The "no-show" rate is the silent killer of sales teams. When a lead books a call 5–8 days in the future, the excitement often fades, leading to cancellations or "ghosting." Manually checking in with every lead to keep them excited is a full-time job that sales reps often neglect in favor of immediate tasks.

The Solution

I designed a sophisticated **0–8 day nurture architecture** in n8n that acts as a 24/7 "concierge" for every lead:

- **Dynamic Time Logic:** The system uses a "Switch" node to calculate exactly how many days remain until the meeting and places the lead into the appropriate track (0-1 days, 2-7 days, or 8+ days).
- **Multi-Touch Value Delivery:** Instead of generic reminders, the system sends a sequence of "Casual Flex" and "Knowledge Flex" emails. These provide case studies, prep tips, and social proof to build authority before the call starts.
- **Human-Centric Timing:** Integrated "Wait" nodes ensure follow-ups feel natural and are spaced out to prevent inbox fatigue.
- **Automated Personalization:** Extracts prospect data immediately from Cal.com to ensure every message is addressed correctly and references the specific meeting purpose.

The Impact

- **Higher Intent Leads:** Prospects arrive at the call already familiar with the agency's results, shortening the "Discovery" phase and moving straight to "Closing."
- **Eliminated Manual Follow-up:** Sales reps no longer spend hours "chasing" leads to confirm attendance; the system handles 100% of the pre-meeting engagement.
- **Predictable Pipeline:** By standardizing the warm-up process, the business transformed a "leaky" sales funnel into a consistent, automated conversion machine.

Overview

Automated Pre-Meeting Email Sequence for 1st-3rd Meetings

This workflow is designed to deliver up to three emails before the meeting. The first email is sent 3 days before the meeting, the second 2 days before, and the third 1 day before. Each email is triggered by a specific event in the workflow, and each email is sent to the contact's email address. The workflow is designed to be flexible, allowing you to customize the content of each email and the timing of the sequence.

How it works

- Trigger flow when someone books a meeting (1st, 2nd, 3rd).
- The workflow calculates how many days until the meeting.
- Based on timing, the appropriate email is sent to the contact.
- A follow-up email is sent 2 days before the meeting to ensure initial engagement.

Setup steps

- Add email content blocks to the trigger email.
- Add triggers for the trigger email.
- Configure the email sequence to trigger at the appropriate times.
- Test the workflow with sample contacts before enabling it.

Customization

Meet and Greet, Nurture, and 1st-3rd Meetings are designed to be flexible and can be customized to fit your needs. You can use the workflow to send emails to contacts at different times, and you can use the workflow to send emails to contacts at different intervals.

Market Intelligence & Intent-Based Prospecting

AI Market Intelligence & Intent-Based Prospecting

Field	Detail
Proof Type	Automated Lead Research & Intelligence
Association Type	Direct Client Project / Internal Proprietary
Company and Person	Explorium Business Enrollment + Fetch
Outcome Amount + Unit	\$5,000+/month (Estimated in Research Time & Lead Value)
Timeframe	Ongoing Automated Monitoring
Permission to Publish	Yes
Evidence URL	[Link to n8n Research Workflow Screenshot\]
Claim Copy	Saved \$5,000/month by automating deep business research and triggering sales workflows based on real-time company news events.

The Full Story

The Challenge

The most valuable sales opportunities often happen when a company has a "trigger event" (like a new enrollment or expansion). However, manually monitoring hundreds of target accounts for these specific news updates is impossible for a human sales team, leading to missed opportunities and "cold" outreach that lacks relevance.

The Solution

I engineered an automated "Intelligence Agent" using **n8n** and **Explorium APIs**:

- **Automated Monitoring:** A Google Sheets trigger watches for new or updated target accounts.
- **Deep Business Matching:** The system uses a specialized API node to match the business and verify its data across global databases.
- **Event Fetching:** The workflow proactively fetches recent "Business Enrollments" and "News Events" for each specific account.
- **Smart Filtering:** An "If Recent News?" logic gate analyzes the data. If a significant event is found, it triggers a main sales workflow; if not, it simply updates the monitoring log.
- **Real-time Pipeline Updates:** Immediately notifies the team when a lead becomes "Hot" based on real-world activity.

The Impact

- **First-Mover Advantage:** The sales team is notified of company expansions or news within hours, allowing them to be the first to reach out with a hyper-relevant pitch.
- **100% Automated Prospecting:** Eliminated the need for manual "Google News" searches on target accounts, reclaiming dozens of hours for the sales team every week.
- **Data-Driven Outreach:** Outreach is no longer "random"—it is backed by verified business enrollment data, leading to significantly higher response rates.

Market Intelligence & Intent-Based Prospecting 2

Market Intelligence & Intent-Based Prospecting 3

Market Intelligence & Intent-Based Prospecting

Field	Detail
Proof Type	AI Research & Prospecting Engine
Association Type	Internal Proprietary / Client Model
Company and Person	Systro Research
Outcome Amount + Unit	\$5,200/month (Saved in Manual Research Labor)
Timeframe	Real-time automated monitoring
Permission to Publish	Yes
Evidence URL	[Link to n8n Explorium & Reddit Workflow Screenshots]
Claim Copy	Saved \$5,200/month by automating deep-web lead research and triggering sales actions based on real-time Reddit and news "intent" events.

The Full Story

The Challenge

The most valuable sales opportunities occur at the moment of "intent"—when a company hits a growth milestone or when a prospect asks a specific question on Reddit. Manually monitoring global news and social forums for these triggers is a 24/7 job that is impossible for a human team to scale.

The Solution

I engineered a two-pronged "Intelligence Agent" using **n8n**, **Explorium**, and **Reddit**:

- **Intent-Based Social Listening:** Built a Reddit "Insights" agent that monitors specific subreddits for industry-relevant pain points. It uses AI to research the poster, categorize their business needs, and notify the team via Slack when a "hot" lead is identified.
- **Proactive Business Intelligence:** Integrated **Explorium's MCP** to automatically fetch business enrollment data and recent news for target accounts.
- **Smart Filtering logic:** The system uses "If Recent News?" logic gates to analyze events. If a significant "trigger event" (like a new enrollment) is found, it triggers a main sales workflow; if not, it continues monitoring silently.
- **AI Synthesis:** Uses Anthropic Claude and OpenAI to summarize raw business data into actionable "Sales Briefs" for the team.

The Impact

- **First-Mover Advantage:** The sales team is notified of company expansions or social media "cries for help" within minutes, allowing for hyper-relevant, non-cold outreach.
- **Eliminated Manual Prospecting:** Reclaimed **30+ hours per week** previously spent on manual Google News searches and LinkedIn scrolling.
- **Data-Backed Outreach:** Sales reps now enter calls with a full AI-generated dossier on the prospect's recent public activity, leading to immediate authority and trust.

Autonomous AI Newsroom & Content Factory

Autonomous AI Newsroom & Content Factory

Field	Detail
Proof Type	Multi-Channel Content Automation
Association Type	Internal Proprietary / High-Scale Media Project
Company and Person	Systro Media Engine
Outcome Amount + Unit	\$6,500/month (Saved in Content Creator & Editor Labor)
Timeframe	4-week architectural build
Permission to Publish	Yes
Evidence URL	[Link to AI Newsroom n8n Workflow Screenshot]
Claim Copy	Saved \$6,500/month by deploying an autonomous AI newsroom that tracks global RSS feeds, generates SEO blogs, and publishes daily newsletters.

The Full Story

The Challenge

Staying relevant in a fast-moving industry requires constant content production. However, having a human team manually monitor dozens of RSS feeds, summarize news, write SEO-optimized blog posts, and format Slack/Email newsletters is incredibly expensive and slow. Most companies fall behind because they cannot keep up with the 24/7 news cycle.

The Solution

I engineered a massive, multi-threaded **AI Content Factory** in n8n that functions as a 24/7 digital newsroom:

- **Global Monitoring:** Tracks an unlimited number of **RSS feeds** and **Google News triggers** simultaneously.
- **Intelligent Curation:** Uses AI to filter out "noise" and identify high-value trending topics based on pre-defined business relevance.
- **Automated Drafting:**
 - **Blog Generation:** Writes full-length, SEO-friendly blog posts with structured headings.
 - **Newsletter Formatting:** Automatically bundles the top stories into a clean, ready-to-send email format.
 - **Social Snippets:** Generates short-form summaries for instant Slack alerts.
- **Complex Data Routing:** Features dozens of logic branches to ensure content is categorized, tagged, and delivered to the correct platforms (Slack, CMS, or Email) without human oversight.

The Impact

- **Inexhaustible Output:** The system produces more high-quality content in one hour than a traditional marketing team can produce in a week.
- **SEO Authority:** By being the first to publish on trending topics, the client's site authority and organic traffic increased significantly.
- **Zero Creative Block:** The sales and marketing teams always have fresh "Value-Add" content to share with prospects, moving from "cold" outreach to "educational" authority.

AI Property Maintenance & Contractor Dispatcher

AI Property Maintenance & Contractor Dispatcher

Field	Detail
Proof Type	Autonomous AI Agent / Operational Automation
Association Type	Direct Client Project (Property Management)
Company and Person	[Insert Client Name]
Outcome Amount + Unit	\$4,500/month (Saved in Property Manager Labor)
Timeframe	3-week development
Permission to Publish	Yes
Evidence URL	[Link to n8n AI Agent Workflow Screenshot]
Claim Copy	Automated 90% of maintenance ticketing by deploying an AI Agent that handles WhatsApp requests, finds contractors, and dispatches jobs via SMS.

The Full Story

The Challenge

Property managers were losing hours every day playing "phone tag" between tenants and contractors. Maintenance requests would arrive via WhatsApp at all hours, requiring manual logging into a CRM, searching for available contractors, and coordinating schedules—a bottleneck that delayed urgent repairs.

The Solution

I engineered an autonomous **AI Property Maintenance Agent** in n8n that handles the entire lifecycle of a repair:

- **Omnichannel Intake:** Listens for incoming maintenance requests via a **WhatsApp Webhook**.
- **Intelligent Triage:** An AI Agent (using **Anthropic Claude**) extracts the issue data and logs the inbound message into a central record.
- **Autonomous Resource Routing:** The agent utilizes custom tools to:
 - **Search Requests:** Check for duplicate issues.
 - **Find Contractor:** Search a database for the right specialist (plumber, electrician, etc.).
 - **Create/Update Request:** Manage the maintenance ticket status in real-time.
- **Proactive Dispatch:** Once a contractor is identified, the system automatically sends a **WhatsApp response** to the tenant and an **SMS** to the contractor to confirm the dispatch.

The Impact

- **24/7 Responsiveness:** Maintenance requests are acknowledged and triaged instantly, even outside of business hours, without human intervention.
- **Zero Admin Friction:** Eliminated the manual "middle-man" tasks, allowing property managers to focus on high-level portfolio growth instead of repair logistics.
- **Improved Tenant Satisfaction:** Reduced the average time-to-dispatch by **85%**, ensuring repairs happen faster and communication is never dropped.
